MEDIA SECURITY PROTECTIVE SYSTEMS

GOVERNMENT MEDIA SECURITY WITH CAMPAIGN SYSTEM (**2010**)– this system includes media security with a campaign system that can manage the various levels of security, and manage the press, such that the press always remains under control, and there are always re-directs to keep the media on the information that is on the agenda of the media campaign system. In the Federal Government, this includes press deferrals from the Pentagon to keep even the requests for information destroyed under war powers, then a contingent re-direct to civilian agencies, and then the ability for Intelligence Community briefings of improving the security of information. Another component may include a compartmented media prosecution that creates information of how the 'media' isn't secure enough, while another prosecution develops and releases solutions to the media insecurities, such that both prosecutions are prosecuting the 'media' as a fictitious entity, and the process results in the media security having the ability to take over the media through extortion of the fictitious entity of the media overall, and the ability to exploit and media gains through another department, such as having the ability to shut down other stories based on their insecurities, and replace the stories with new stories.

AUTONOMOUS MEDIA SECURITY (**2011**, **2022**) – this pertains to security of the Media, through the reduction of Media targeting towards the protectee, and the improvement of coordination of Media activities and organization, such that the Media is provided information in a way that is compliant with both the logical and the physical dimensions of law and systematic procedures.

The system would be able to detect if the source of the targeting was intended as a threat, if there was another explanation, and in both types of cases how to stop the targeting activities and how to ensure that the specific type of targeting activities does not occur again, through the establishment of a pattern check that minimizes the types of threat patterns while taking the minimal amount of action, such as the use of security through access control lists on telecommunications.

LOGICAL ROBOT DETECTION SYSTEM (**2010**) – this technology pertains to the use of a logical robot detection system that locates automated processes and systems that attempt to access and/or send data in any way to any of the systems on a secured network. This includes multiple layers of logical robot intrusion detection systems that filter traffic based on known patterns, and conduct scans of suspect robots and automated systems that are unknown to build profiles of the robots and systems, and the secured network determines all traffic input and output based on authorization rather than secured access, such that secured access occurs above authorization, and the secure network scans for half-open connections to determine what the purpose of the traffic is before

AUTONOMOUS MENTAL HEALTH CRIMES PREVENTION SYSTEM (**2022**) – prevention of mental health crimes through the detection of any **MINDFRAME** or Mind Control software that could cause a person to have mental health disorders or conditions, such as giving a person **SCHIZOPHRENIA** using **MIND CONTROL TECHNOLOGY** to take their **INTELLECTUAL PROPERTY** (**IP**) by making them look like a criminal, and then making the technologies, patenting them, and then saying that they are crazy, later, when they try to take credit for inventing the technologies, due to a lack of documentation and a lack of financial assets linking back to a bank account in the name of the victim that has all of transactions linked to it, via the **U.S. SECRET SERVICE**, and then later fixing the situation by not informing him/her of anything pertaining to what was done to cover it up, by "helping them [him/her]" develop the inventions through government employees, or private industry "assets", and then winning all of the physical and liquid assets for him/her through lawsuits, so it was easier for him/her to become rich, according to the **U.S. SECRET SERVICE** manual on war crimes pertaining to these types of crimes. It usually deprives the original inventor the ability to interact with their inventions over a prolonged period associated with their own personal and professional success relating to the development and patenting of those very same inventions, due to the physical mental illnesses, including criminal insanity and criminal national security insanity, implanted using **MIND CONTROL TECHNOLOGY** against the original **INTELLECTUAL PROPERTY** (**IP**) inventor. The isolation of the compartmentalization from the **SYSTEMATIC CASE CORRELATION SYSTEM**, and the separate compartmentalization of the data from the **SYSTEMATIC CASE CORRELATION SYSTEM** under **SPECIAL COMPARTMENTALIZED INTELLIGENCE** (**SCI**) **SECURITY CLEARANCE** ensures that the **SYSTEMATIC CASE CORRELATION SYSTEM** does not damage the information within the **CASE COMPARTMENTALIZATION SYSTEM**, while the system has the authority to remove cases that are politically motivated and intended to target individuals based on political targeting.
